

World-Class
Beverage
Manufacturing,
Delivered
Globally.

KOLADIYA INDUSTRIES
PRIVATE LIMITED

www.koladiyaindustries.com

Most brands don't
Fail at the idea.

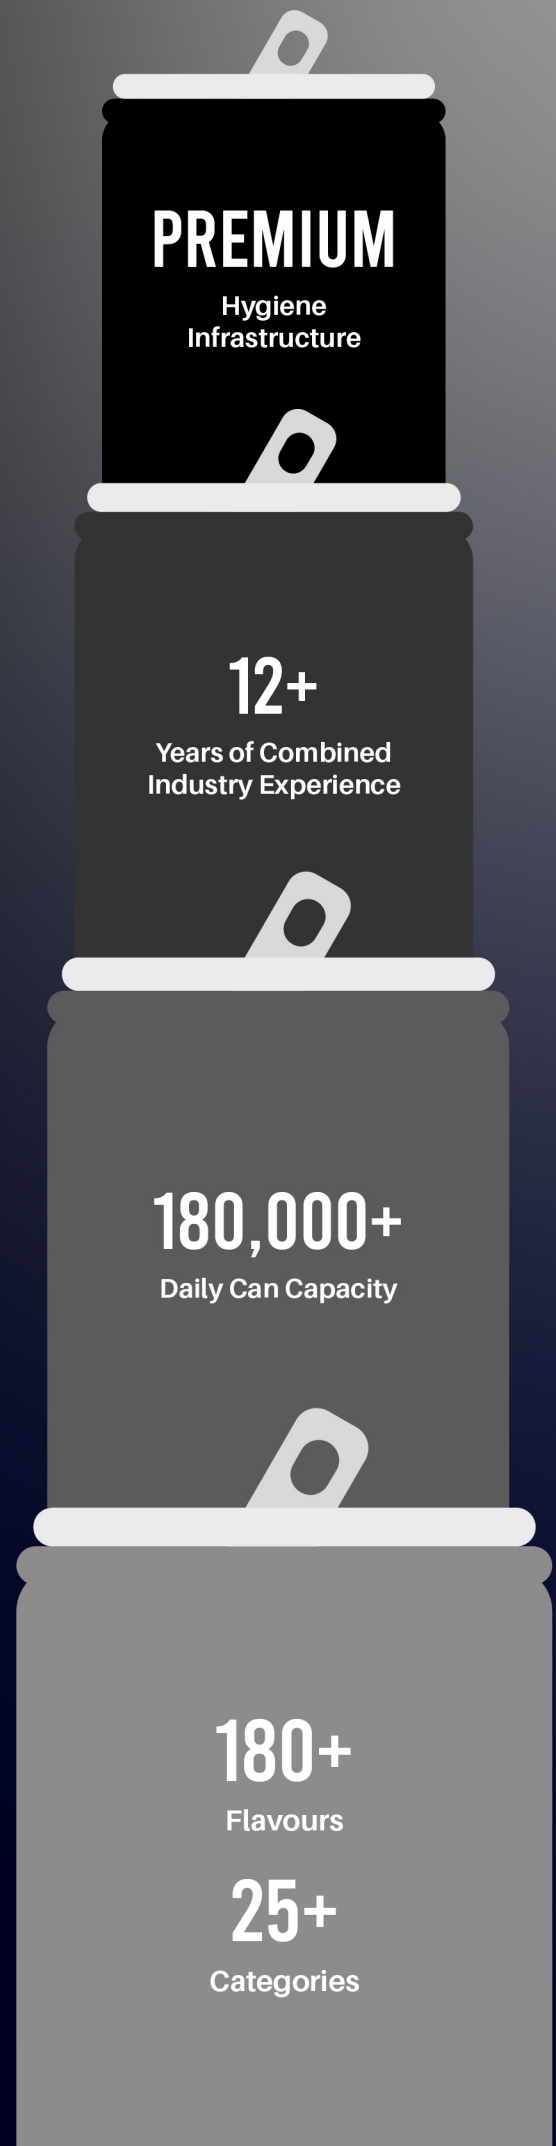

They fail
at the Execution.

Building a beverage brand means solving formulation, sourcing, compliance, filling, packaging and shelf - life all before a single can reaches a customer. Each one is a specialist discipline. Together they are a factory.

We already solved it.

Koladiya Industries exists so that beverage brands can focus entirely on their product and their market, while the manufacturing runs quietly and reliably behind them.

**YOU OWN THE BRAND.
WE OWN THE BURDEN OF MAKING IT.**

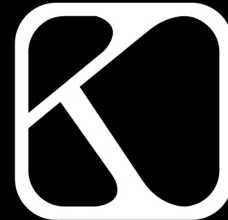

About Us

Koladiya Industries is a full-scale contract and private-label beverage manufacturer, built for brands entering the canned beverage market without building a factory of their own.

We operate a fully automated, high-throughput canning facility engineered for consistency at volume. From a first pilot run to a nationwide rollout, every batch moves through the same controlled process - audited raw materials, validated formulation, automated filling, and multistage in-house quality verification.

We don't put our name on the can. Every product that leaves our line carries your brand, your recipe and your specification, produced under complete confidentiality.

**KOLADIYA INDUSTRIES
PRIVATE LIMITED**

Made in India. Built for the World.

Global beverage brands are rebalancing where they manufacture. India has become the answer - not because it is cheaper, but because it now combines scale, certification and raw material access in one place.

We built Koladiya Industries for that moment. The facility was specified from day one to international audit standards, not domestic minimums, because we knew the cans leaving our line would need to clear customs, retailer compliance and buyer inspection in markets far from Surat.

The result is a manufacturing partner you can place an order with from anywhere, and receive product that meets the same standard every time.

The People Behind the Line

A canning line does not run itself. Behind every batch that leaves this facility is a shift team that set it up, a lab technician who cleared it, and a quality supervisor who signed it off.

65+ People Across Production, Quality, Laboratory and Logistics

What We Do

Contract Manufacturing

You bring the brief and the brand. We handle formulation, production, filling and packaging under your label, at your required volume - with no capital tied up in plant or machinery.

Private-Label & White-Label Manufacturing

Ready-to-market formulations across 180+ Flavours & 25+ Categories that you can brand and launch with minimal development time. The fastest route from decision to shelf.

OEM / ODM Development

Custom recipes built from scratch in our in-house lab - tuned to your target taste profile, your cost per unit, and the regulatory market you are selling into.

Export-Ready Production

Compliance documentation, labelling standards and export packaging aligned to international requirements, backed by our IEC registration and certified systems.

Four ways brands work with us - from an approved recipe you want manufactured, to a product that doesn't exist yet.

The Partnership Model

What You Retain

Your formulation.
Your brand identity.
Your customer relationships.
Your margin structure.
Your route to market.

What We Manage

Plant capital. Machinery.
Skilled production personnel.
Compliance overhead. R&D cost.
Quality infrastructure.
Inventory risk on raw materials

Where We Start

Pilot batches from
12,500 units - small enough to test a market,
structured enough to scale the moment it works.

**You stay a brand.
We stay the factory.**

Inside The Facility

We specialise exclusively in can-based beverages. That narrow focus is deliberate-it allows us operate faster, more cleanly and more consistently than a general-purpose line ever could.

- Fully automated high-speed canning and seaming line
- Advanced pasteurisation and thermal processing
- Validated CIP (Clean-in-Place) sanitation protocols
- Coding, batch traceability and date marking
- Controlled-environment filling zone

Our Capabilities

Manufacturing excellence
that powers your brand-measured,
not claimed.

Line Speed **7,200 CANS / HOUR**

Daily Output **180,000+ CANS**

Monthly Output **5 MILLION+ CANS**

Can Format **250 ML SLIM CAN**

Minimum Batch **FROM 12,500 UNITS**

Flavours **180+**

Categories **25+**

- In-house R&D and formulation laboratory
- Full in-house batch testing
- Hygiene and safety control systems
- Custom flavour development
- Flexible batch sizing
- Sugar-reduced and zero-sugar variants
- Functional ingredient dosing
- Confidential production
- Export documentation support

Capacity is easy to publish.
Repeatability is not.
Our figures hold because the line is
automated end-to-end
the thousandth can in a production
run is made to the same
specifications as the first.

Built For Scale. Run For Consistency

Every can carries a batch code that links back to its raw material lot, production shift, line settings and test results. If a question is ever asked about a consignment, we can answer it from records - not from memory.

& Dispatch

Automated
Line

Product Categories

180+ Flavours & 25+ Categories across four families all produced under your brand.

Energy & Functional

- Energy drinks
- Caffeinated beverages
- Functional beverages
- Vitamin and electrolyte drinks
- Protein water
- Herbal and botanical formulations

Carbonated

- Soft drinks
- Carbonated mocktails
- Carbonated juices
- Tonic water
- Ginger ale
- Non-alcoholic malt beverages

Water & Light

- Sparkling water
- Flavoured water
- Low-sugar and zero-sugar variants

Speciality

- Kombucha
- Coffee-based beverages
- Nutraceutical and ayurvedic formulations
- Custom developments to your brief

Can Formats

DIRECT-PRINTED CAN

Artwork printed directly onto the can body for a premium, durable, shelf-ready finish. Best suited to established brands running consistent high volumes.

SHRINK-SLEEVED CAN

Heat-shrink sleeve delivering full-body, high resolution graphics. Lower entry commitment and faster turnaround-the practical route for new brands, seasonal SKUs and limited runs.

Where The Product Gets Built

Our in-house lab develops, tests and stabilises formulations before anything reaches the line.

We work backwards from three constraints you define: the taste profile you want, the cost per unit you can carry, and the regulatory market you are selling into. That means trial batches, iteration, shelf-life and stability testing, and your sign-off before you commit to production volume.

Formulation Support Covers

- Taste and sweetness profiling
- Carbonation levels
- Functional ingredient dosing
- Sugar reduction and zero sugar variants
- Shelf-life and stability validation
- Label and nutritional compliance
- Cost engineering to a target unit price

Your proprietary formulation remains confidential.

Client-specific formulations are handled under agreed confidentiality and intellectual property terms. Confidentiality is contractual, not conversational.

How We Work

1

Consultation & Ideation

We understand your category, target consumer, price point and timeline.

2

Formulation & Sampling

Our R&D lab develops trial batches against your brief.

3

Approval & Testing

Taste, stability and shelf-life performance evaluated, You sign off before scale-up.

4

Artwork & Packaging

Can format finalised, Artwork prepared for print or sleeve.

5

Production

Automated filling, seaming, pasteurisation and coding at full line speed.

6

Quality Release & Dispatch

Batch-tested, packed, documented and dispatched.

Why Partner With Us

- End-to-End Manufacturing
- In-House R&D Support
- Custom Formulation
- Branding & Packaging Support
- Market-Trend Guidance
- Export-Ready Solutions
- Confidential Manufacturing
- Speed to Market

QUALITY & COMPLIANCE

Every batch traceable.
Every ingredient documented.
Every dispatch verified.
